Art Unit: 2181

1. Claims 1-29 are presented for examination.

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 3. Claims 1-29 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.
- 4. Claims 1-29 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.
- 5. Claims 1-29 make reference to checking predictions generated by a checking predictor (element 86 in applicants' Fig. 2). This checking predictor generates predictions more slowly (3 to 4 clock cycles more slowly) than the next cache line predictor (element 72 of applicants' Figs. 2 and 8). Each checking prediction is generated based on a next line prediction and has at least a target address. When the checking prediction target address does not match the actual target address, the checking predictor is updated. And finally, "the set of predictions 73 generated by the

Art Unit: 2181

next-line predictor 72 closely approximate the predictions of a more complex checking predictor" (page 7, lines 20-21 of applicants' specification). As best the examiner is able to determine after carefully reading applicants' specification, applicants have never described how one of ordinary skill constructs a checking predictor and how it functions to make checking predictions. It is slow (?), has target addresses (?) arranged in some manner, can be updated in some manner, has predictions closely approximate (?) to next-line predictions, and is more complex (?) than the predictor depicted in Fig. 8. The examiner considers the checking predictor and how it functions to be essential to the enablement of applicants' claims and invention; yet, the description of the checking predictor is so limited as to preclude one of ordinary skill from constructing the checking predictor and, as a result, practicing applicants' invention.

- 6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 7. Claims 1-29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 8. Each of applicants' claims make reference to generating checking predictions and claims 18-29 explicitly claim a checking predictor but applicants' description of a checking descriptor and how it functions to generate a checking prediction is so limited as to preclude the examiner from determining the true metes and bounds of applicants' claims. See paragraph 5, *supra*, for a further explanation of related issues.

Application/Control Number: 10/735,675

Art Unit: 2181

9. The examiner regrets he is unable to apply art because one cannot clearly determine what applicants have invented and claimed.

- 10. Any inquiry concerning this communication should be directed to William M.

 Treat at telephone number (571) 272-4175. The examiner works at home on

 Wednesdays but may normally be reached on Wednesdays by leaving a voice message using his office phone number. The examiner also works a flexible schedule but may normally be reached in the afternoon and evening on three of the four remaining weekdays.
- 11. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
